RESULT 1

AAA73329

No. is the number of results predicted by chance to have a greater than or equal to the score of the result being printed, Pred.

is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                       The present sequence is the coding sequence for a mutated version of a fusion protein created using the Hepatitis C virus (HCV) NS3 and NS4A protease enzymes. These proteins are both essential for the replication of the virus, acting to cleave its replicative proteins from the POP proteins from the POP genome. Inhibitors of the two proteins should be effective as antiviral treatments of HCV infection. This is useful as HCV can load to chronic liver disease such as cirrhosis, liver failure and liver cancer. The present invention concerns a number of NS3 mutants and NS3-NS4A fusion proteins which can be used to identify inhibitors of this type, as well as enabling structural studies of the protease and protease: inhibitor complexes. The protein produced from this
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             180

```
The present sequence is the coding sequence for a mutated version of a fusion protein created using the Hepatitis C virus (HCV) NS3 and NS4A protease enzymes. These proteins are both essential for the replication of the virus, acting to cleave its replicative proteins from the polyprotein produced from the HCV genome. Inhibitors of the two proteins should be effective as antiviral treatments of HCV infection. This is useful as HCV can lead to chronic liver disease such as cirrhosis, liver failure and liver cancer. The present invention concerns a number of NS3 mutants and NS3-NS4A fusion proteins which can be used to identify inhibitors of this type, as well as enabling structural studies of the protease and protease:inhibitor complexes. The protein produced from this sequence contains the alpha-helix0-1 variant.

```
The present sequence is the coding sequence for a fusion protein created using the Hepatitis C virus (HCV) NS3 and NS4A protease enzymes. These proteins are both essential for the replication of the virus, acting to cleave its replicative proteins from the polyprotein produced from the HCV genome. Inhibitors of the two proteins should be effective as antiviral treatments of HCV infection. This is useful as HCV can lead to chronic liver disease such as cirrhosis, liver failure and liver cancer. The present invention concerns a number of NS3 mutants and NS3-NS4A fusion proteins which can be used to identify inhibitors of this type, as protease:inhibitor complexes.

mutants and NS3-NS4A fusion proteins which can be used to identify inhibitors of this type, as well as enabling structural studies of the protease and protease:inhibitor complexes. The protein produced from this sequence contains the alpha-helix0-1 variant.
                                                                                                            The present sequence is the coding sequence for a mutated version of a fusion protein created using the Hepatitis C virus (HCV) NS3 and NS4A protease enzymes. These proteins are both essential for the replication of the virus, acting to cleave its replicative proteins from the polyprotein produced from the HCV genome. Inhibitors of the two proteins should be effective as antiviral treatments of HCV infection. This is useful as HCV can lead to chronic liver disease such as cirrhosis, liver failure and liver cancer. The present invention concerns a number of NS3

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                fusion protein created using the Hepatitis C virus (HCV) NS3 and NS4A protease enzymes. These proteins are both essential for the replication of the virus, acting to cleave its replicative proteins from the polyprotein produced from the HCV genome. Inhibitors of the two proteins should be effective as antiviral treatments of HCV infection. This is useful as HCV can lead to chronic liver disease such as cirrhosis, liver failure and liver cancer. The present invention concerns a number of NS3 mutants and NS3-NS4A fusion proteins which can be used to identify inhibitors of this type, as well as enabling structural studies of the protease and protease:inhibitor complexes. The protein produced from this

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                fusion protein created using the Hepatitis C virus (HCV) NS3 and NS4A protease enzymes. These proteins are both essential for the replication of the virus, acting to cleave its replicative proteins from the polyprotein produced from the HCV genome. Inhibitors of the two proteins should be effective as antiviral treatments of HCV infection. This is useful as HCV can lead to chronic liver disease such as cirrhosis, liver failure and liver cancer. The present invention concerns a number of NS3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Modified hepatitis C virus (HCV) NS3 protease comprising at least 1 substitution of a hydrophobic alpha-helix 0 amino acid to a hydrophilic amino acid, useful for screening inhibitors that may treat hepatitis {\sf C}
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence is the coding sequence for a mutated version of a

The present sequence is the coding sequence for a mutated version of a fusion protein created using the Hepatitis C virus (HCV) NS3 and NS4A protease enzymes. These proteins are both essential for the replication of the virus, acting to cleave its replicative proteins from the polyprotein produced from the HCV genome. Inhibitors of the two proteins should be effective as antiviral treatments of HCV infection. This is useful as HCV can lead to chronic liver disease such as cirrhosis, liver failure and liver cancer. The present invention concerns a number of NS3 mutants and NS3-NS4A fusion proteins which can be used to identify inhibitors of this type, as well as enabling structural studies of the protease and protease inhibitor complexes. The protein produced from this sequence contains the alpha-helix0-7 variant.

These proteins are both essential for the replication of the virus, acting to cleave its replicative proteins from the polyprotein produced from the HCV genome. Inhibitors of the two proteins should be effective as antiviral treatments of HCV infection. This is useful as HCV can lead to chronic liver disease such as cirrhosis, liver failure and liver cancer. The present invention concerns a number of NS3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Modified hepatitis C virus (HCV) NS3 protease comprising at least 1 substitution of a hydrophobic alpha-helix 0 amino acid to a hydrophilic amino acid, useful for screening inhibitors that may treat hepatitis C

pestivirus genome where the Npro protease gene is replaced with NS3 protease gene, useful for in vivo screening of compounds which inhibit HCV infection -
```

Example 2; Columns 17-28; 20pp; English.

The present invention relates to a nucleic acid construct encoding a chimeric Hepatitis C virus (HCV)-pestivirus genome. The construct comprises a pestivirus genome where a Npro pestivirus protease gene is replaced with a genome encoding a functional HCV NS3 protease. Furthermore, acch junction site recognised by the Npro protease is replaced with a junction site recognised by the HCV NS3 protease. The construct is useful for screening compounds that inhibit HCV in vivo by inhibiting HCV protease, where screening may be in cell culture or in an animal model. The present sequence is a chimeric clone of BVDV (bovine viral diarrhea virus)/HCV NS3-wt, which was used to illustrate the present invention.

This invention relates to a novel synthetic viral prototoxophore domains apecific for a viral enzyme. This prototoxophore may be bound and modified by the viral enzyme. This prototoxophore may be bound and modified by the viral enzyme thus converting it to a toxophore. Also disclosed in the invention is a method for enhancing the anti-viral enter this method comprises contacting a cell, effected with a virus or is susceptible to infection, with a prototoxophore. The invention further comprises an assay to identify anti-viral agents, comprising contacting an infected cell with a candidate agent and comparing the ability of the agent to inhibit the growth or infectivity of the virus in the cell. The prototoxophores of the invention may be useful for reducing or inhibiting viral infectivity, by contacting a cell (e.g. lymphocyte, nerve cell, connective tissue cell, muscle cell or heptocyte) which is infected with a virus or is susceptible to infection with a virus, with an effective amount of the prototoxophore. The cells are cell lines an effective amount of the prototoxophore. The cells are cell lines or infected with a virus or is susceptible to infection with a virus, with an effective amount of the prototoxophore is also useful for ameliorating the severity of a viral infection in a subject, where the virus is selected from human immodeficiency virus (HW), herpes simplex virus (HS), rinnovirus and prototoxophore to the subject. The prototoxophores of the invention are cell surject and prototoxophore is a succeptible to be present sequence represents an entitivity and present sequence represents and partivity and prototoxophores of the present sequence represents and partivity and prototoxophore to the subject.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            has

CORP.) (tag a) extending through clones 14i, 11b, 7f, 7e, 8h 33c, 40b, 37b, 35, 36, 81, 32, 33b, 25c, 14c, 8f, 33f, 33g and 39c of hepatitis CORTINE (ACT) COMBAL IN creating the composite sequence the following heterogeneities were considered. Clone 31c contains a sequence the following contains as the considered. Clone 33c contains a sequence the following contains as well as in 5 other overlapping clones, nuclectide #789 is a clone 33c, as well as in 5 other overlapping clones, nuclectide #789 is a clone 37b the corresponding nuclectide is an A. This heterogenity may have important ramifications for protein folding.

CO RECOIGE $1 in clone 37b the corresponding nuclectide is an A. This colone 8 is a T which may represent a cloning artifact clones is an A. Therefore the residue in clone 7 and in 3 other overlapping clones is an A. Therefore the residue in clone 8 is represented as a T clone 8 is a T. The 3 terminal sequence of clone 33f is coverlapping clones is a T. The 3 terminal sequence of clone 33f is coverlapping clones is a T. The 3 terminal sequence of clone 33f is coverlapping clones is a T. The 3 terminal sequence of clone 33f is clone 33f in clones is an A. The 3' terminus of clone 141 is depicted and instead the corresponding artifacts have been omitted and instead clones in an A pecause the corresponding artifacts have been of mitted and instead clones in an A performing artifacts have been of mitted and instead clones in an A performing artifacts have been of mitted and instead clones in an appear in probes to detect the presence of RCV nucleic acids in samples. The pollypeptide(s) it encodes could be used as infinite and passive immuno-assay reagents and vaccines and to generate antibodies useful in cloneit acids in manning in the corresponding detection of the corresponding performance of t
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CGCAGGGGCCGGGAGATACTGCTCGGGCCAGCCGATGGAATGGTCTCCAAGGGGTGGAGG 926

encodes antigens which react with antibodies in patients with non-A non-B hepatitis (NANBH). The CDNA can be used to design probes, or to synthesise polypeptides, which are used to diagnose HCV-induced NANBH, to raise antibodies for immunoassay or treatment, or to produce vaccines.                                                                                                                                                                                                                                                                                                                                                                                                                            It is a double-stranded nucleotide sequence of the open reading frame (ORF) (tag a) extending through clones 12f to 15e of hepatitis C virus (HCV) cDNA. It can be used to make oligomeric DNA hybridisation probes to detect the presence of HCV nucleic acids in samples. The polypeptide(s) it encodes could be used as immunoassay reagents and vaccines and to generate antibodies useful in diagnosis and passive immunotherapy for HCV infection/non-A, non-B hepatitis.

                                                                                                                                                                                                                                                                                                                                                                                                It is a double-stranded nucleotide sequence of the open reading frame (ORF) (tag a) extending through clones K9-1 to 15e of hepatitis C virus (HCV) cDNA. It can be used to make oligomeric DNA hybridisation probes to detect the presence of HCV nucleic acids in samples. The polypeptide(s) it encodes could be used as immunoassay reagents and vaccines and to generate antibodies useful in diagnosis and passive immunotherapy for HCV infection/non-A, non-B hepatitis. (Updated on 25-MAR-2003 to correct PR field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           72 AlaGlyThrArgThrIleAlaSerProLysGlyProValIleGlnMetTyrThrAsnVal 91
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     18 ......AlaTyrAlaGlnGlnThrArgGlyGluGluGlyCysGlnGlu 31
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The sequence shows a composite hepatitis C virus (HCV) cDNA, derived by aligning clones k9-1 through 15e in 5'-3' direction. The cDNA encodes artigons which react with antibodies in patients with non-A non-B hepatitis (NAMEH). The cDNA can be used to design probes, or to synthesise polypeptides, which are used to diagnose HCV-induced NAMEH, to raise antibodies for immunoassay or treatment, or to produce vaccines. See also AAP90208, and AAN90303-35.

(N.B. This record was resubmitted to correct errors in the sequence.) (Updated on 25-MAR-2003 to correct PR field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Hepatitis C virus gene - used for prodn. of polynucleotide probes, polypeptide(s) and antibodies for diagnosis, prevention and treatment of infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           32 ThrSerGluThrGlyArgAspLysAsnGluValGluGlyGluValGlnIeValSerThr
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AlaalaGlnThrPheLeuAlaThrCysIleAsnGlyValCysTrpThrValTyrHisGly

//seeds were surface sterilized then germinated under axenic
conditions in the dark at room temperature on filter paper
with water, nystatin and cefotaxime in covered
crystallization dishes. Five-day old seedlings were
incubated at 90% RH for 24 hr. Shoots were then harvested,
total RNA was prepared, poly(A) RNA was multified, one
primary unamplified cDNA library was made, 600000 pfu were
primary unamplified cDNA library was made, 600000 pfu were
primary unamplified cDNA library was made, 500000 pfu were
in vivo excised to give pBluescript SK(-) cDNA phagemids.
These steps were performed in the TJ Close laboratory at
the University of Callifornia, Riverside (Choi, Close,
Penton). Phagemids were plated and picked at the Clemson
University denomics Institute (CUGI) Begum, Palmer,
Frisch, Atkins and Wing). Plasmid DNA preparations, DNA
sequencing and sequence analysis were performed at CUGI
(Wingy Yu, Frisch, Henry, Simmons, Oates, Rambo, Main).
The sequence has been trimmed to remove vector sequence

/clone_llb="C. reinhardtii CC-1690, Stress condition I,
normalized, Lambdd 2ap II"
/note="Vector: pBluescript II SK-; Site_I: EcoRI; Site_2:
XhoI; This library, constructed by John Davies and Jeffrey
McDermott, combines colvas from CC-1690 cells grown to
mid-log phase in TAP-N (30 min, lhr, 4hr). TAP-S (30 min,
lhr, 4hr), TAP-P (4hr, 12hr, 24hr), N03 to NH4 (30min,
lhr, 4hr), TAP-P (4hr, 12hr, 24hr), N03 to NH4 (30min,
lhr, 4hr) and NH4 to N03 (30min, lhr, 4hr). PolyAm mRNA was
purified from each sample, pooled and cDNA synthesized.
The cDNA was directionally cloned into lambda Zap II
(Stratagene) in the EcoRI (5) and Xhor (3') sites.
pBluescript II SK- plasmids were excised from the lambda
ZAP clones by superinfection with Exassist (Stratagene)
phage. The library was normalized using method 4 described
in Bonaldo et al (1996) Genome Research 6: 791-806."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             125 AspVallle----- 136
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   --- GlySerLeuLeuSerProArgProIleSerTyrLeu 148

                                                                                     The present sequence is a mutated version of a fusion protein created using the Hepatitis C virus (HCV) NS3 and NS4A protease enzymes. These proteins are both essential for the replication of the virus, acting to cleave its replicative proteins from the polyprotein produced from the HCV genome. Inhibitors of the two proteins should be effective as antiviral treatments of HCV infection. This is useful as HCV can lead to chronic liver disease such as cirrhosis, liver failure and liver cancer. The present invention concerns a number of NS3 mutants and NS3-NS4A fusion proteins which can be used to identify inhibitors of this type, as

                                                                                                    The present sequence is a mutated version of a fusion protein created using the Hepatitis C virus (HCV) NS3 and NS4A protease enzymes. These proteins are both essential for the replication of the virus, acting to cleave its replicative proteins from the polyprotein produced from the HCV genome. Inhibitors of the two proteins should be effective as antiviral treatments of they unfection. This is useful as HCV an lead to chronic liver disease such as cirrhosis, liver failure and liver cancer. The present invention concerns a number of NS3 mutants and NS3-NS4A fusion proteins which can be used to identify inhibitors of this type, as well as enabling structural studies of the protease and protease. This sequence contains the alpha-helix0-1

The present sequence is a mutated version of a fusion protein created using the Hepatitis C virus (HCV) NS3 and NS4A protease enzymes. These proteins are both essential for the replication of the virus, acting to cleave its replicative proteins from the polyprotein produced from the HCV genome. Inhibitors of the two proteins should be effective as antiviral treatments of HCV infection. This is useful as HCV can lead to chronic liver disease such as cirrhosis, liver failure and liver cancer. The present invention concerns a number of NS3 mutants and NS3-NS4A fusion proteins which can be used to identify inhibitors of this type, as

This sequence contains the alpha-helix0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    120
                                                                                                                               The present sequence is a mutated version of a fusion protein created using the Hepatitis C virus (HCV) NS3 and NS4A protease enzymes. These proteins are both essential for the replication of the virus, acting to cleave its replicative proteins from the polyprotein produced from the HCV genome. Inhibitors of the two proteins should be effective as antiviral treatments of HCV infection. This is useful as HCV can lead to chronic liver disease such as cirrhosis, liver failure and liver cancer. The present invention concerns a number of NS3 mutants and NS3-NS4A
                                                                                                                                                                                                                                                                                                                                                                                                                               9
                                                                                                                                                                                                                                                                                                                                                                                                                                                          09
                         Modified hepatitis C virus (HCV) NS3 protease comprising at least 1 substitution of a hydrophobic alpha-helix \emptyset amino acid to a hydrophilic amino acid, useful for screening inhibitors that may treat hepatitis C

                                                                                                                The present sequence is a mutated version of a fusion protein created using the Hepailis C virus (HCV) NG3 and NS4A protease enzymes. These proteins are both essential for the replication of the virus, acting to cleave its replicative proteins from the polyprotein produced from the HCV genome. Inhibitors of the two proteins should be effective as antiviral treatments of the two proteins should be effective as antiviral treatments of the two proteins. This is useful as HCV can lead to chronic liver disease such as cirrhosis, liver failure and liver cancer. The present invention concerns a number of NG3 mutants and NG3-NS4A fusion proteins which can be used to identify inhibitors of this type, as well as enabling structural studies of the protease and protease. This sequence contains the alpha-helix0-1

                                                                                                                                                                                                                                                                                                The present sequence is a mutated version of a fusion protein created using the Hepatitis C virus (HCV) NS3 and NS4A protease enzymes. These proteins are both essential for the replication of the virus, acting to cleave its replicative proteins from the polyprotein produced from the HCV genome. Inhibitors of the two proteins should be effective as antiviral treatments of the two proteins should be effective as antiviral treatments of HCV infection. This is useful as HCV can lead to chronic liver disease such as cirrhosis, liver failure and liver cancer. The present invention concerns a number of NS3 mutants and NS3-NS4A well as enabling structural studies of the protease and protease:inhibitor complexes. This sequence contains the alpha-helix0-7
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  61 TCINGVCWTVYHGAGTRTIASPKGPVIQMYTNVDKDLVGWPAPQGSRSLTPCTCGSSDLY 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                ò
                                                                                                                                    The present sequence is a mutated version of a fusion protein created using the Hepatitis C virus (HCV) NS3 and NS4A protease enzymes. These proteins are both essential for the replication of the virus, acting to cleave its replicative proteins from the polyprotein produced from the HCV genome. Inhibitors of the two proteins should be effective as antiviral treatments of the two proteins should be effective as antiviral treatments of the two proteins; its useful as HCV can lead to chronic liver disease such as cirrhosis, liver failure and liver cancer. The present invention concerns a number of NS3 mutants and NS3-NS4A well as enabling structural studies of the protease and proteins which can be used to identify inhibitors of this type, as well as enabling structural studies of the protease and protease:inhibitor complexes. This sequence contains the alpha-helix0-7

                                                                                                                                                                                     Modified hepatitis C virus (HCV) NS3 protease comprising at least 1 substitution of a hydrophobic alpha-helix 0 amino acid to a hydrophilic amino acid, useful for screening inhibitors that may treat hepatitis C
                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence is a fusion protein created using the Hepatitis C virus (HCV) NS3 and NS4A protease enzymes. These proteins are both essential for the replication of the virus, acting to cleave its replicative proteins from the polyprotein produced from the HCV genome. Inhibitors of the two proteins should be effective as antiviral treatments of HCV infection. This is useful as HCV can lead to chronic liver disease such as cirrhosis, liver failure and liver cancer. The present invention concerns a number of MS3 mutants and NS3-NS4A fusion proteins which can be used to identify inhibitors of this type, as well as enabling structural studies of the protease and protease:inhibitor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                TCINGVCWTVYHGAGTRTIASPKGPVIQMYTNVDKDLVGWPAPQGSRSLTPCTCGSSDLY
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1 MKKKGSVVIVGRINLSGDTAYAQQTRGEEGCQETSQTGRDKNQVEGEVQIVSTAAQTFLA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    HCV genomic amino acid sequence isolated from infected human LG.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          5:
